

National Education Policy -2020 Common Minimum Syllabus for All U P State Universities and Colleges For First Three Years of Higher Education

Subject-Biotechnology (For Three Subject Pattern)

Name	Designation	Affiliation
Steering Committee		
Mrs. Monika S. Garg (IAS),	Additional Chief	Deptt. of Higher Education,
Chairperson, Steering Committee	Secretary	U.P., Lucknow
Prof Poonam Tandan	Professor,	Lucknow University,
	Deptt. of Physics	Lucknow, U.P.
Prof Hare Krishna	Professor	CCS University, Meerut, U.P.
	Deptt. of Statistics	
Dr Dinesh C. Sharma	Associate Professor	K. M. Govt. Girls PG
		College, Badalpur, G. B.
		Nagar, U.P.
Supervisory Committee- Science F	aculty	
Dr Vijay Kumar Singh	Associate Professor,	Agra College, Agra
	Deptt. of Zoology	
Dr Santosh Singh	Dean,	Mahatama Gandhi Kashi
	Deptt. of Agriculture	Vidyapeeth, Varanasi, U.P.
Dr Baby Tabussam	Associate Professor,	Govt. Raza PG College
	Deptt. of Zoology	Rampur, U. P.
Dr Sanjay Jain	Associate Professor,	St. John's College, Agra
	Deptt. of Statistics

Subject Prerequisite

The candidate should have passed (10+2) examination in science stream with PCB (Physics, Chemistry, Biology and/or Biotechnology) or PCM (Physics, Chemistry and Maths) or any other science subject.

Programme Outcomes (POs)

After completion of the B. Sc. Biotechnology programme, the candidate should be able to:

PO1	Demonstrate knowledge for in-depth analytical and critical thinking to
	identify, formulate and solve the issues related to Biotechnology research,
	Biotechnology Industry, Pharma industry, Medical or hospital related
	organizations, and Academia.
PO2	Demonstrate skills to use modern analytical tools/ software/ equipment and
	analyse and solve problems in various courses of biotechnology.
PO3	Execute their professional roles in society as biotechnology professionals,
	employers and employees in various industries, researchers and educators.
PO4	Design, perform experiments, analyse and interpret data for investigating
	complex problems in biotechnology and related fields.
PO5	Demonstrate learning skills to work as a team in a multidisciplinary
	environment.
PO6	Design and develop sustainable solutions to major biological problems by
	applying appropriate biotechnology tools.
PO7	Develop skills, attitude and values required for self-directed, lifelong learning
	and professional development.
PO8	Acquire knowledge and understanding of norms and ethics in the field of
	biotechnology.

	PROGRAMME SPECIFIC OUTCOMES (PSOS)		
CERTI	FICATE IN TOOLS AND TECHNIQUES OF CELL AND MOLECULAR		
	BIOLOGY		
First	This course introduces the knowledge of cell biology, genetics, molecular		
Year	biology and genetic engineering. After completion of this certificate course, students will be able to –		
	PSO1: demonstrate and apply their knowledge of cell biology, genetics, molecular biology and genetic engineering to solve the problems related to the field of biotechnology		
	 PSO2: gain knowledge about the application of various types of microscope, karyotyping, banding techniques, chromosome painting and FACS. PSO3: understand the basic concepts of genetics and molecular biology such as inheritance pattern, DNA replication, transcription and translation PSO4: understand and perform various recent molecular and recombinant DNA technology techniques in early diagnosis and prognosis of human diseases. PSO5: perform experiments of DNA isolation, agarose gel electrophoresis, gene cloning, transformations, protein expression and purification. This 		

experience would enable them to begin a career in industry that engages in			
genetic engineering as well as in research laboratories conducting fundamental			
research. PSO6 : apply at technical positions in different research laboratories, diagnostic			
centres and industries.			
DIPLOMA IN TOOL AND TECHNIQUES IN BIOTECHNOLOGY			
After completion of diploma course, students will be able to-			
PSO1: familiarize with basic laboratory instruments and understand the			
principle of measurements using those instruments with experiments in			
biochemistry.			
PSO2 : understand the significance of Biochemistry and basics of enzymes.			
PSO3: learn the chemistry, structure and functions of major bio-molecules and			
metabolism of carbohydrate, protein etc.			
PSO4: understand different biochemical tools and techniques such as chromatography, electrophoresis, X-ray diffraction, NMR and mass			
chromatography, electrophoresis, X-ray diffraction, NMR and mass spectrometry			
PSO5: perform different experiments based on the techniques such as			
chromatography, electrophoresis, centrifugation etc.			
PSO6: understand the different methods of sterilization			
PSO7: understand and also able to perform different immunological techniques			
like agglutination reaction, ABO typing and ELISA.			
DEGREE IN BACHELOR OF SCIENCE			
After completing the three years degree course in Biotechnology, the students			
will be able to –			
PSO1: demonstrate the concepts in computational Biology. Understand the			
interrelationship between Biology and Computer			
PSO2: acquire knowledge in different domains of biotechnology enabling their			
application in industry, research and academia.			
PSO3: perform and analyse the results of experiments using basic laboratory techniques of cell biology, molecular biology, genetic engineering, biochemistry,			
immunology, microbiology, bioinformatics, biostatistics, animal and plant			
biotechnology and Food biotechnology.			
PSO4: recognize the foundations of modern biotechnology and explain the			
principles that form the basis for recombinant technology.			
PSO5: develop an ability to properly understand the technical aspects of existing			
technologies that help in addressing the biological and medical challenges faced by			
humankind. PSO6: exhibit ability to do research independently as well as in collaboration.			
PSO7: recognize the importance of Bioethics, IPR, and entrepreneurship.			

Programme	e/Class: Certificate Year: First (1)	Semester: First (I)
	Subject: Biotechnology	
Couse Code	Genetics	
	Course Outcomes (COs)	
	introduces the principles of cell biology and genetics	. After completion of this
,	ents will be able to-	and functions of call its
	different areas of cell biology including the structure nelles such as mitochondria, nucleus etc.	e and functions of cell, its
•	rstand how genetic information is transmitted in organis	m
	rstand the role of cytoskeleton and its remodelling inclu	
	improper remodelling.	ang the discuses associate
	how the synthesized proteins are transported to different	t organelles.
	rstand the regulation of cell cycle, programmed cell deat	-
	different cell biology techniques like karyotyping, chi	
FAC	S, centrifugation and microscopy.	_

Maximum 1 (75(UE)+25	6 1	er University norms
<u>(75(UE)+25</u> Total Numl	Der of Lectures-Tutorials-Practical (in hours per wee	»k)L_T_P• 4_0_0
Unit	Topics	N0. of Lectures
I	• Introduction and history of Biotechnological	
	with special reference to contribution of	
	scholars in biological sciences	
II	Prototype structure of animal, plant and bacteri	al cells 8
	Diversity of cell size and shape	
	 Cell theory 	
	 C-value paradox 	
	 Cell Membrane: Chemical components of bio 	alogical
	membranes, organization and Fluid Mosaic	
	and membrane transport.	
	• Cytoskeleton and Extra cellular matrix	
III	Structure and Function of Cell organelles:	9
	Lysosomes: Vacuoles and micro bodies: Struct	ure and
	functions	
	• Ribosomes: Structures and function including	role in
	protein synthesis.Mitochondria: Structure and function, Ge	nomes
	• Mitochondria. Structure and function, Ge biogenesis.	
	 Chloroplasts: Structure and function, genomes, 	
	biogenesis	
	• Nucleus: Structure and function, nuclear envelo	ppe
IV	Chromosome structure:	9
	• Chromosomes: chromatin and chrom	losomes
	organization, euchromatin and heterochr	
	nucleosome, metaphase chromosome, gen	

	chromosomes.	
	• DNA as genetic material, Structure of DNA	
	• Structural and numerical changes in human	
	chromosomes and ploidy in plants.	
	• Mutations: Types of mutations, spontaneous and	
	induced mutations, Physical and chemical mutagens	
V	Cell cycle, Cancer and Cell Signaling:	7
·	 Cell Cycle: Mitosis and Meiosis: Control points in 	,
	cell-cycle progression in yeast and higher organisms	
	 Cell senescence and programmed cell death 	
	 Cancer – chromosomal disorders, oncogenes and 	
	tumor suppressor genes	
	··· •	
VI	Introduction to cell signalling and cell –cell interaction Mendelian and nonmendelian genetics:	8
V I	 Historical developments in the field of genetics. 	0
	• Instantial developments in the field of genetics. Organisms suitable for genetic experimentation and	
	their genetic significance	
	 Mendelian genetics : Mendel's experimental design, 	
	• Mendenan genetics : Mender's experimental design, monohybrid, di-hybrid and tri hybrid crosses, Law of	
	segregation & Principle of independent assortment	
	 Allelic interactions: Concept of dominance, 	
	recessiveness, incomplete dominance, co-dominance,	
	semi-dominance, pleiotropy	
	 Sex determination and sex linkage: Mechanisms of sex 	
	determination, Environmental factors and sex	
	determination, Environmental factors and sex determination, sex differentiation, Barr bodies, dosage	
	compensation, genetic balance theory	
VII	Linkage, crossing over and population genetics:	8
V 11	Linkage, crossing–over and chromosome and genetic	0
	mapping	
	 Extra chromosomal inheritance: Rules of extra nuclear 	
	inheritance, maternal effects, maternal inheritance,	
	cytoplasmic inheritance, organelle heredity, genomic	
	imprinting.	
	 Genetic Code: deciphering genetic code; degeneracy, 	
	unusual codons in mitochondria Mutations: types,	
	mechanisms	
	• Evolution and population genetics: Hardy Weinberg	
	law (prediction, derivation), allelic and genotype	
	frequencies, changes in allelic frequencies,	
	evolutionary genetics, natural selection.	
VIII	Cytological techniques:	9
	 Microscopy and staining techniques 	-
	Microtomy	
	Karyotyping	
	Chromosome banding,	

	• <i>in situ</i> hybridization and FISH
	chromosome painting
	Fluorescence Activated Cell Sorting

Course books published in Hindi must be prescribed by the University/College

Course prerequisite

To study this course, student must have passed semester I.

Suggested Continuous Internal Evaluation (CIE) methods

Total Marks: 25

10 marks for Test

10 marks for presentation along with assignment

05 marks for Class interactions

Programn	ne/Class: Diploma	Year: Second (2)	Semester: Third (III)
		iotechnology	
Couse Coo	le: B100301T Cour	rse Title: Biochemistry an	d Biochemical tools
		Outcomes	
	essful completion of the course, studen		
	erstand the significance of Biochemis	5	
	n the chemistry of carbohydrates, lipic	ds, proteins and amino acid	ls.
	erstand the basics of enzymes.		
	erstand the metabolism of carbohydra	-	
	w the chemical structure of nucleotide	es including their compone	ents, describe primary,
	ondary structure of DNA and RNA.	~ .

Unit	l opi	C	Lectures
Ι	Amino acids and Protein:		7
	• Structure and properties of A	mino acids	/
	 Types of proteins and their cl 		
	 Forces stabilizing protein stru 		
	 Different Level of structural 		
	Denaturation and renaturation		
II	Carbohydrates:		7
	• Structure, Function and p	roperties of Monosaccha	arides,
	Disaccharides and Polysacch	-	
	Homo and Hetero Polysaccha	arides, Mucopolysaccharid	es,
	Bacterial cell wall polysacch	arides, Glycoprotein's and	d their
	biological functions.		
III	Nucleic acids:		7
	• Structure and functions:		
	Physical & chemical properti		
	& nucleotides, purines	& pyrimidines,. Biolog	gically
	important nucleotides,		c l
	• Double helical model of		
	stabilizing DNA double helic denaturation and renaturation		DINA,
IV	Lipids:	I UI DNA.	6
IV	• Structure and functions of Li	nids	0
	 Classification, nomenclature 		acids
	essential fatty acids.	and properties of fatty	
	 Phospholipids, sphingolipid 	ds, glycolipids, cerebro	osides.
	gangliosides, Prostaglandins,		,
V	Enzymes and Enzyme classification		8
	•	fication of Enzymes,	brief
	introduction to active site.	5 - 7	
	• Kinetics of enzyme actions		
	Cofactors, coenzyme, prost	hetic groups, holoenzym	e and

uncompetitive type. 9 VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 9 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Affinity chromatography, Gas chromatography and HPLC) 8	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 9 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC)	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 9 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC)	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC)	TCA, and Glyoxylate cycle • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids • Oxidation of amino acids and urea cycle. • Oxidation of amino acids and urea cycle. VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role • Deficiency of vitamins and hormones and related human diseases. VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC)
uncompetitive type. 9 VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) • Spectroscopy (UV-Vis) • NMR • NMR • NMR	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • NMR NMR 8	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Gel- permeation (molecular sieve, chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • NMR	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 9 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • NMR NMR 8	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Affinity chromatography, Gas chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • NMR	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • NMR NMR 8	TCA, and Glyoxylate cycle • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids • Oxidation of amino acids and urea cycle. • Oxidation of amino acids and urea cycle. VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role • Deficiency of vitamins and hormones and related human diseases. VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • NMR
uncompetitive type. 9 VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • Spectroscopy (UV-Vis) • Spectroscopy (UV-Vis)	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • NMR NMR 8	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 9 • Spectroscopy (UV-Vis) • NMR	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 9 • Spectroscopy (UV-Vis) • NMR	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Affinity chromatography, Gas chromatography and HPLC) 8 • NMR NMR 8	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids • Oxidation of amino acids and urea cycle. VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • NMR	TCA, and Glyoxylate cycle • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids • Oxidation of amino acids and urea cycle. • Oxidation of amino acids and urea cycle. VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role • Deficiency of vitamins and hormones and related human diseases. VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • NMR
uncompetitive type. 9 VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) • Spectroscopy (UV-Vis) • NMR • NMR • NMR	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • NMR • NMR • X-ray diffraction • X-ray diffraction	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 9 • Spectroscopy (UV-Vis) • NMR • X-ray diffraction	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 9 • Spectroscopy (UV-Vis) • NMR • X-ray diffraction	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Mini-layer chromatography, Gas chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • NMR • X-ray diffraction	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • NMR • X-ray diffraction	TCA, and Glyoxylate cycle • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids • Oxidation of amino acids and urea cycle. • Oxidation of amino acids and urea cycle. VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role • Deficiency of vitamins and hormones and related human diseases. VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, and HPLC) 8 • Spectroscopy (UV-Vis) • NMR • X-ray diffraction • X-ray diffraction
uncompetitive type. 9 VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 9 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Affinity chromatography, Gas chromatography and HPLC) 8 • NMR X-ray diffraction 0 • Zaray diffraction • Centrifugation 10	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Affinity chromatography, Gas chromatography and HPLC) • Spectroscopy (UV-Vis) • NMR X-ray diffraction • Centrifugation	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Gel- permeation (molecular sieve, chromatography, Thin-layer chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) • Spectroscopy (UV-Vis) • NMR X-ray diffraction • X-ray diffraction	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) • Spectroscopy (UV-Vis) • NMR X-ray diffraction • X-ray diffraction	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) • Spectroscopy (UV-Vis) • NMR X-ray diffraction • Centrifugation	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Thin-layer chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) • Spectroscopy (UV-Vis) • NMR X-ray diffraction • Centrifugation	 TCA, and Glyoxylate cycle Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids Oxidation of amino acids and urea cycle. VII Vitamins and Hormone: Introduction to Vitamins, hormones, Phytohormones and their role Deficiency of vitamins and hormones and related human diseases. VIII Techniques: Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) Spectroscopy (UV-Vis) NMR X-ray diffraction Centrifugation Centrifugation
uncompetitive type. 9 VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography and HPLC) 9 • Spectroscopy (UV-Vis) • NMR X-ray diffraction • X-ray diffraction • Centrifugation • Mass spectrometry	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Affinity chromatography, Gas chromatography and HPLC) 8 • NMR X-ray diffraction 0 • Mass spectrometry Mass spectrometry 10	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 9 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography and HPLC) 8 • NMR X-ray diffraction 9 • X-ray diffraction • Centrifugation 9	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 9 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography and HPLC) 8 • NMR X-ray diffraction 9 • X-ray diffraction • Centrifugation 9	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 9 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Affinity chromatography, Gas chromatography and HPLC) 8 • NMR X-ray diffraction 9 • Mass spectrometry 4 4	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Affinity chromatography, Gas chromatography and HPLC) 8 • NMR X-ray diffraction 0 • Array diffraction 0 0 • Mass spectrometry 0 0	TCA, and Glyoxylate cycle Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids Oxidation of amino acids and urea cycle. NII VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 9 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • NMR X-ray diffraction 0 • Centrifugation 9 0 • Mass spectrometry 0 0
uncompetitive type. 9 VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 9 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, and HPLC) 8 • NMR X-ray diffraction • X-ray diffraction	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Affinity chromatography, Paper chromatography and HPLC) 9 • Spectroscopy (UV-Vis) • NMR • X-ray diffraction • Centrifugation • Mass spectrometry 5	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permetion (molecular sieve, chromatography, Gel- permetion (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) • Spectroscopy (UV-Vis) • NMR X-ray diffraction • Centrifugation • Mass spectrometry Suggested Reading 9	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Affinity chromatography, Gas chromatography and HPLC) 9 • Spectroscopy (UV-Vis) • NMR • X-ray diffraction • Centrifugation • Mass spectrometry 9	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 9 • Spectroscopy (UV-Vis) • NMR • X-ray diffraction • Centrifugation • Mass spectrometry 9	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Affinity chromatography, Paper chromatography and HPLC) 9 • Spectroscopy (UV-Vis) • NMR • X-ray diffraction • Centrifugation • Centrifugation • Mass spectrometry	TCA, and Glyoxylate cycle • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids • Oxidation of amino acids and urea cycle. VII Vitamins and Hormone: • Introduction to Vitamins, hormones, Phytohormones and their role • Deficiency of vitamins and hormones and related human diseases. VIII Techniques: • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) • Spectroscopy (UV-Vis) • NMR • X-ray diffraction • Centrifugation • Mass spectrometry
uncompetitive type. 9 VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 8 • Introduction to Vitamins, hormones, Phytohormones and their role • Deficiency of vitamins and hormones and related human diseases. VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography and HPLC) • Spectroscopy (UV-Vis) • NMR • X-ray diffraction • Centrifugation • Mass spectrometry • Mass spectrometry 8	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Gel- permeation (molecular sieve, chromatography, Thin-layer chromatography, Paper chromatography, affinity chromatography, Paper chromatography and HPLC) 9 • NMR X-ray diffraction 8 • Zaray diffraction 9 9 • Mass spectrometry Suggested Reading 1 1. Berg, JM Tymoczko, JL. Gatto, GJ., Stryer, L. (2015). Biochemistry. (8th ed.) W H Freeman and Company New York. 9	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids • Oxidation of amino acids and urea cycle. VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Gel- permeation (molecular sieve, chromatography, Mini-layer chromatography, Paper chromatography, MRR 8 • NMR X-ray diffraction 6 • Mass spectrometry Suggested Reading 1 1. Berg, JM Tymoczko, JL. Gatto, GJ., Stryer, L. (2015). Biochemistry. (8th ed.) VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role • Deficiency of vitamins and hormones and related human diseases. VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Affinity chromatography, Gas chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • NMR • X-ray diffraction • X-ray diffraction
uncompetitive type. 9 VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • NMR 10	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • NMR NMR 8	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 9 • Spectroscopy (UV-Vis) • NMR	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Gel- permeation (molecular sieve, chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • NMR	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Affinity chromatography, Gas chromatography and HPLC) 8 • NMR NMR 8	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids • Oxidation of amino acids and urea cycle. VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • NMR	TCA, and Glyoxylate cycle • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids • Oxidation of amino acids and urea cycle. • Oxidation of amino acids and urea cycle. VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role • Deficiency of vitamins and hormones and related human diseases. VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • NMR
uncompetitive type. 9 VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) • Spectroscopy (UV-Vis) • NMR • NMR • NMR	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • NMR NMR 8	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 6 • Spectroscopy (UV-Vis) • NMR	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 6 • Spectroscopy (UV-Vis) • NMR	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Affinity chromatography, Gas chromatography and HPLC) 8 • NMR NMR 9	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • NMR NMR 8	TCA, and Glyoxylate cycle • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids • Oxidation of amino acids and urea cycle. • Oxidation of amino acids and urea cycle. VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role • Deficiency of vitamins and hormones and related human diseases. VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • NMR
uncompetitive type. 9 VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) • Spectroscopy (UV-Vis) • NMR • NMR • NMR	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • NMR NMR 8	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 6 • Spectroscopy (UV-Vis) • NMR	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 6 • Spectroscopy (UV-Vis) • NMR	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Affinity chromatography, Gas chromatography and HPLC) 8 • NMR NMR 9	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • NMR NMR 8	TCA, and Glyoxylate cycle • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids • Oxidation of amino acids and urea cycle. • Oxidation of amino acids and urea cycle. VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role • Deficiency of vitamins and hormones and related human diseases. VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • NMR
uncompetitive type. 9 VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography (Column chromatography, Ion- exchange chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) • Spectroscopy (UV-Vis) • NMR • NMR • NMR	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • NMR NMR 8	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Gel- permeation (molecular sieve, chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • NMR	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Gel- permeation (molecular sieve, chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • NMR	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • Spectroscopy (UV-Vis) • NMR	VI Metabolism: 9 • Metabolism of carbohydrates- Gluconeogenesis, Glycolysis, TCA, and Glyoxylate cycle 9 • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids 9 • Oxidation of amino acids and urea cycle. 8 VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role 8 • Deficiency of vitamins and hormones and related human diseases. 8 VIII Techniques: 8 • Chromatography, Gel- permeation (molecular sieve, chromatography, Affinity chromatography, Paper chromatography, Thin-layer chromatography, Gas chromatography and HPLC) 8 • NMR NMR 8	TCA, and Glyoxylate cycle • Metabolism of fatty acids-oxidation of saturated, unsaturated fatty acids • Oxidation of amino acids and urea cycle. • Oxidation of amino acids and urea cycle. VII Vitamins and Hormone: 8 • Introduction to Vitamins, hormones, Phytohormones and their role • Deficiency of vitamins and hormones and related human diseases. Course prerequisite

To study this course, student must have passed semester II.

Suggested Continuous Internal Evaluation (CIE) methods

Total Marks: 25

10 marks for Test

10 marks for presentation along with assignment

05 marks for Class interactions

Programm	ne/Class:	Diploma	Year: Second (2)	Semester: Third(III)	
	Subject: Biotechnology				
Couse Co	de: B100	302P	Course Title: Biochemistry Lab		
			Course Outcomes		
Students w	vill get pra	actical exposu	re to commonly used biochemical te	chniques and also they	
become fai	miliar to u	ise instrument	ts like calorimeter, pHmeter etc.		
Introduce t	the primar	ry steps in bio	molecules (focus on proteins) purific	cation which	
includes va	arious met	thods in isolat	tion and quantitation of proteins.		
	-	1	from a heterogenous mixture.		
			natographic techniques to purify bior		
		U 1	oles of electrophoresis and UV/Vis and		
-	1		lication of the knowledge to get basic	e structural	
informatio		ins			
Credits: 2			Core Compulsory		
Maximum	n Marks:	100	Minimum Passing Marks: As per	University norms	
(75(UE)+2	· //				
Total Nun	nber of L	Lectures-Tute	orials-Practical (in hours per week)L-T-P: 0-0-4	
			Торіс	No. of Lectures	
	1. P	Preparation of	normal and molar solutions	60	
		Preparation of			
		~	vity of any enzyme under optime	um	
		onditions.			
			ffect of pH, temperature on the activ	rity	
	0	of salivary am	ylase enzyme.		

г <u> </u>	
	5. Estimation of blood glucose by glucose oxidase
	method. 6. Spectrophotometer/colorimeter(Beer-Lambert's law)
	Estimation of Protein by UV-vis Spectrometer
	i. (i)Lowry et al. method for estimation
	of protein (ii)Biuret method for
	estimation of protein
	7. Spectroscopic estimation of DNA (UV)
	8. Electrophoresis (a)Electrophoresis of red blood cell proteins (b) Electrophoresis of DNA
	9. Separation of Amino acids by paper chromatography.
	10. Qualitative tests for Carbohydrates, lipids and proteins
	11. Estimation of DNA by Diphenylamine and RNA by
	Orcinol methods.
	12. Estimation of reducing and total sugar by DNS and
	H ₂ SO ₄ -phenol methods.
	13. Effect of pH and temperature on enzyme activity.
	14. Determination of pK_a value of a weak acid by
	titrating with strong base.

Ι	Diversity and class	ification of microbes:	7
	• Fundamenta	ls, History and Evolution of Micr	robiology.
	Classificatio		Microbial
	taxonomy,	criteria used including	molecular
	11	Microbial phylogeny and	current
	classification		
	Prokaryotic	iversity: Distribution and charac and Eukaryotic cells,	
		and cell structure of major g sms - Viruses, Bacteria, Algae, F	
II	Microbial growth:		8
	• Growth cur and continue	ve, Generation time, synchrono ous culture, measurement of gr ting growth of bacteria.	

	Bacterial Reproduction: Transformation, Transduction	
	and Conjugation. Endospores and sporulation in	
	bacteria.	
III	Pathogen contamination and infectious diseases:	8
	• Water Microbiology: Bacterial pollutants of water,	
	coliforms and non coliforms. Sewage composition and	
	its disposal.	
	Food Microbiology: Important microorganism in food	
	Microbiology: Moulds, Yeasts, bacteria.	
	• Major food born infections and intoxications,	
	Preservation of various types of foods. Fermented	
	Foods.	
	• Bacterial diseases of human- Tuberculosis, Tetanus,	
	Typhoid, Cholera	
	• Viral diseases of human-Hepatitis B andC, AIDS	
IV	Sterilization, cultivation and staining:	7
	• Principals and applications of different methods of	
	sterilization	
	• Cultivation and Maintenance of microorganisms:	
	Nutritional categories of micro-organisms	
	• Methods of isolation, Purification and preservation.	
	• Principals of staining and types of staining	
V	Introduction to immune system:	8
	• Introduction to Immunology, Components of	
	mammalian immune system (cell and organs), Innate	
	and Adaptive immunity	
	• Humoral and cell mediated immune response, Clonal	
	selection theory	
	• An overview of primary and secondary immune	
	responses	
VI	Antigen and Antibody structure and diversity:	8
	 Antigen, epitopes and Adjuvents 	-
	 Structure and isotypes of Immunoglobulins allotypes 	
	and idiotypes	
	 B- and T-cell receptors 	
	 B and T cell maturation 	
	• Antibody diversity generation, somatic gene rearrangements during B-lymphocyte differentiation,	
	allelic exclusion, affinity maturation, class switching ,	
	somatic hypermutation	
VII	MHC, antigen processing and presentation:	7
* 11	 Major Histocompatibility complexes – class I & class 	/
	II MHC antigens, antigen processing.	
	 Antigen processing and presentation 	
	• Autoimmune diseases, Immunodeficiency-AIDS and SCID.	
1 /111		7
VIII	Immunological Techniques and Vaccines:	/
	• Introduction to immunodiagnostics – Precipitation,	
	Agglutination, RIA, ELISA and Immunofluorescence.	

	Passive & active immunization.
	 Types of vaccines-DNA vaccines, recombinant
	vaccines, inactivated vaccine
	Common indigenous vaccines

	• File Format (Genbank, DDE		Prot).	
	• Introduction to Metadata	· · · ·	/	
	Fuzzy, Neighboring search.	, ,	,	
III	Sequence and Phylogeny analysis			8
	Introduction to Sequence	s, alignments and I	Dynamic	
	Programming; Local alig	nment and Global al	ignment	
	(algorithm and example), P	airwise alignment (BLA	AST and	
	FASTA Algorithm) and	multiple sequence al	ignment	
	(Clustal W algorithm).			
	• Introduction to BLAST, us	-	erpreting	
	results, Phylogenetic Analys	IS.		
	PCR primer designing etc.			
IV	8			7
	• SRS, Entrez, Sequence	Similarity Searches-	BLAST,	
	FASTA, Data Submission.			
	• Genome Annotation: Patte	ern and repeat finding	g, Gene	
	identification tools.			

\mathbf{V}	Types and Collection of data:	7
	• Primary and Secondary data, Classification and Graphical	
	representation of Statistical data.	
	 Measures of central tendency and Dispersion. 	
	Measures of Skewness and Kurtosis.	
VI	Probability:	8
	• Definition of probability, Theorems on total and compound	
	probability	
	• Elementary ideas of Binomial, Poisson and Normal	
	distributions.	
VII	Sampling:	8
	• Methods of sampling, confidence level, critical region,	
	testing of hypothesis and standard error, large sample test	
	and small sample test.	
	• Problems on test of significance, t-test, chi-square test	
	• for goodness of fit and analysis of variance (ANOVA)	
VIII	Convolution and Degreesions	7
V 111	Correlation and Regression:	/
	• Types, Karl-Pearson's correlation, Spearman's Rank	
	correlation, Regression equation and fitting	
	• Main features of regression analysis-simple and multiple regression analysis	
	Differences between correlation and regression analysis Suggested Reading

Course prerequisite	
To study this course, student must have passed semester IV.	
Suggested Continuous Internal Evaluation (CIE) methods	
Total marks: 25	
10 marks for Test	
10 marks for presentation along with assignment	
05 marks for Class interactions	
Further Suggestions: None	

Programm	e/Class: Degree	Year: Third (3)	Semester: Fifth (V)	
	Subject: Biotechnology			
Couse Code	Couse Code: B100502TCourse Title: Animal and Plant Biotechnology			
	Course Outcomes (COs)			
After completion of this course, students will be able to-				
• understand the principles, practices and application of animal biotechnology in				
Transgenesis, Tissue Engineering, and biopharmaceuticals.				
• understand the principles, practices and applications of plant biotechnology, transgenic				
plant generation, plant tissue culture, plant genomics, and genetic transformation.				
• understand applications of stem cells and tissues engineering.				
• learn different gene delivery methods to deliver foreign gene in plants and animals				
• know about different products of transgenic animals, plants and microbes.				
Credits: 4		Core Compulsory		
Maximum	Maximum Marks: 100Minimum Passing Marks: As per University norms		University norms	
(75(UE)+25(CIE))				
Total Number of Lectures-Tutorials-Practical (in hours per week)L-T-P: 4-0-0				
Unit		Торіс	No. of Lectures	
Ι	Transgenesis:		7	
	 Introduction 	to transgenesis. Transgenic Animals	-	
	Mice, Cow,	Pig, Sheep, Goat, Bird, Insect.		
	 Animal dise 	eases need help of Biotechnology	-	
	Foot-and	mouth disease, Coccidios	is,	

	Trypanosomiasis, Theileriosis.	
II	Gene delivery methods for animals :	8
	Viral vectors	-
	• Vector less or direct DNA transfer, particle	
	bombardment, electroporation,	
	microinjection & chemical methods,	
	creation of animal models of human	
	diseases.	
III	Animal propagation:	6
	Artificial insemination, animal Clones.	
	• Conservation Biology – embryo transfer	
	techniques.	
IV	Genetic modification in Medicine:	8
	• Gene therapy, types of gene therapy, vectors in	
	gene therapy, molecular engineering,	
	Human genetic engineering, problems & ethics	
	• Introduction to Stem Cell Technology and its	
	applications	
V	Introduction, Cryo and organogenic differentiation:	7
	• Types of culture: Seed , Embryo, Callus, Organs,	
	Cell and Protoplast culture.	
	• Micropopagation Axillary bud proliferation,	
	Meristem and shoot tip culture, cud culture,	
	organogenesis, embryogenesis, advantages and	
	disadvantages of micropropagation.	
	• Protoplast isolation and fusion, methods of	
	protoplast isolation, Protoplast development,	
	Somatic hybridization, identification and selection	
	of hybrid cells, Cybrids, Potential of somatic	
	hybridization limitations.	
	• Somaclonal variation nomenclature, methods,	
	applications basis and disadvantages	
VI	In vitro haploid production Androgenic methods:	8
	• Anther culture, Microspore culture androgenesis	
	• Significance and use of haploids, Ploidy level and	
	chromosome doubling, diplodization, Gynogenic	
	haploids, factors effecting gynogenesis	
	Chromosome elimination techniques for production	
* ***	of haploids in cereals.	0
VII	Plant Growth Promoting bacteria:	8
	Nitrogen fixation,	
	Nitrogenase, Hydrogenase, Nodulation	
	Biocontrol of pathogens	
* 7 * * *	Growth promotion by free-living bacteria.	0
VIII	Transgenesis:	8
	Plant transformation technologies	
	• Agrobacterium tumifaciens infection, basis of	
	tumor formation, features of Ti & Ri plasmids,	

	mechanisms of DNA transfer, role of virulence
	genes, use of Ti plasmid as vector, binary vectors
	• Application of plant transformation for productivity
	and performance: Herbicides resistance, insect
	resistance, Bt genes, non-Bt like protease inhibitors,
	virus resistance, long shelf life of fruits and flowers

Subject: Biotechnology			
Couse Code: B100601TCourse Title: Industrial and Environmental Biotechnology			
Course Outcomes			

After successful completion of the course, student will be able to:

- understand the problems in isolation, strain improvement and growth of microorganisms in industrial processes.
- isolate and improve the industrially important microorganisms.
- understand design and types of fermenters and operation of fermenters.
- learn fundamentals of Environmental Biotechnology
- understand the importance of clean (pollution free) environment
- understand biotechnological solutions to address environmental issues including pollution, mineral resource winning, renewable energy and water recycling.
- understand the regulation of bioethics and policies of IPR and entrepreneurship.

Credits: 4	Elective	
Maximum	Marks: 100 Minimum Passing Marks: As per University	sity norms
(75(UE)+25	5(CIE))	
Total Num	ber of Lectures-Tutorials-Practical (in hours per week)L-T-F	P: 4-0-0
Unit	Торіс	No. of Lectures
Ι	Introduction of Industrial microbiology and Bioprocess	7
	technology:	
	• History-Introduction, scope and relation with other	
	sciences.	
	• Screening for new metabolites: primary and secondary	
	products.	
	• Strain development through selection, mutations and	
	recombination, and other recent methods	
II	Bioprocess technology:	9
	 Introduction to bioprocess technology. 	
	 Design and working of a typical bioreactor 	
	• Range of bioprocess technology and its chronological development.	
	• Basic principle components of fermentation	
	technology. Types of microbial culture and its growth	
	kinetics- Batch, Fedbatch and Continuous culture.	
III	Production of alcohols, antibiotic and enzymes:	9
	• Production of alcohols (Ethanol) and organic acids	
	(citric and acetic).	
	Production of biologically active compounds:	

	antibiotics (penicillin) and enzymes (amylase,	
	protease).	
	 Production of microbial food and single cell proteins 	
	 Bioreactor for immobilized cells/enzyme system 	
	 Biosensors and their applications 	
IV	Environment and pollution:	8
1 *	 Physico-chemical and biological characteristics of 	0
	environment.	
	 Water, soil and air as a component of environment. 	
	 Pollutants: Nature, origin, source, monitoring and 	
	their impacts.	
	 Air, Water and Noise pollution 	
	 Conventional fuels and their environmental impact 	
V	Bioremediation:	8
·	• Bioremediation of soil & water contaminated with oil	Ũ
	spills, heavy metals and detergents.	
	• Degradation of lignin and cellulose using microbes.	
	Phyto-remediation.	
	• Degradation of pesticides and other toxic chemicals by	
	micro-organisms- degradation aromatic and	
	chlorinates hydrocarbons and petroleum products.	
VI	Sewage treatment and biofertilizers:	7
	• Treatment of municipal waste and Industrial effluents.	
	• Bio-fertilizers: Role of symbiotic and asymbiotic	
	nitrogen fixing bacteria in the enrichment of soil.	
	• Algal and fungal biofertilizers (VAM)	
VIII	Bioleaching and genetically modified organisms:	6
	• Enrichment of ores by microorganisms (Gold, Copper	
	and Uranium).	
	• Environmental significance of genetically modified	
	microbes, plants and animals.	
VIII	Bioethics, IPR, Entrepreneurship:	6
	• Importance of Bioethics, IPR and entrepreneurship	
	• Introduction to Intellectual Property Rights (IPR)-	
	World Intellectual properties, Indian Intellectual	
	properties	
	Entrepreneurship in India

Programme/Class: DegreeYear: Third (3)Semester: Sixth (VI)			
	Subject: Biotechnology		
Couse Code: B100602TCourse Title: Food Biotechnology			
Course Outcomes			

After successful completion of the course, student will be able to:

- understand the history and evolution of food technology and processing.
- understand the importance microorganisms in food preservation
- learn various food processing and preservation technologies.

Credits: 4	Core Compulsory	,		
	Marks: 100 Minimum Passing Marks: As per Un	iversity norms		
(75(UE)+25				
Total Number of Lectures-Tutorials-Practical (in hours per week)L-T-P: 4-0-0				
Unit	Торіс	No. of Lectures		
Ι	Introduction to Food Biotechnology	7		
	 Historical Background of Food technology 			
	• Traditional fermented foods (meat, fish, bread,			
	sauerkraut, soy bean, coffee, cocoa, tea)			
	• Importance, global trends, codex guidelines,			
	nutritional labelling in India, FSSAI guidelines			
	• Improvements through Biotechnology (e.g. Golden			
	Rice, Potato, Flavr Savr Tomato etc.)			
II	Enzymes in Food Industry:	8		
	Carbohydrases			
	• Proteasase			
	• Lipases			
	Modification of food using enzymes:			
	• Role of endogenous enzymes in food quality,			
	• Enzymes use as processing aid and ingredients			
III	Food Fermentations:	7		
	• Common fermented foods - Cheese, Butter, Yoghurt,			
	fermented/condensed milk and kefir.			
	• Alcoholic beverages (Beer, Wine, Whisky),			
	• Sauerkraut, Pickles, Soy products, Tea, coffee etc.			
IV	Food preservation:	7		
	• Food adulteration and prevailing food standards in			
	India.			
	• Source of microorganisms in milk and their types.			
	• Microbiological examination of milk (standard plate			
	count, direct microscopic count, reductase and			
	phosphatase test).			
	• Dehydration and pasteurization of milk.			
V	Value addition products:	7		
	• Value addition products like High Fructose Syrup,			
	Invert Sugars etc. SCPs (e.g. Spirulina, Yeast etc.) as			
	food supplements,			
	• Edible fungus: Mushrooms. Potential of Probiotics.			
	• Flavour enhancers: Nucleosides, nucleotides and			
	related compounds. Organic acids (Citric acid, Acetic			
	acid) and their uses in foods/food products.			
VI	Vitamins and Minerals:	7		
	• Importance of Vitamins and their supplementation in			
	foods and feedstock.			
	• Food preservation and storage. Food Processing			
	• Important minerals and their function in body and			
	deficiency conditions			

Г

	• Requirements, allowances, enrichment, restorations, fortifications, losses of minerals, optimization and retention of minerals;				
VII	Growth of microorganisms in food:	8			
	• Intrinsic and extrinsic factors.				
	• Food Spoilage (microbial and non-microbial) Control				
	mechanisms of food spoilage: Physical and Chemical.				
	• Microbial spoilage of food and factors affecting them:				
	Spoilage of various kinds of foods: fish. meat, poultry,				
	sea foods, bread and dairy products).				
	• Food adulteration and prevailing food standards in				
	India.				
	• Indicator Microorganisms: As an indicator of good				
	quality				
VIII	Food and water borne diseases:	9			
	• Gastroenteritis, Diarrhoea, Shigellosis, Salmonellosis,				
	Typhoid, Cholera, Polio, Hepatitis, Dental Infections,				
	etc.				
	 Food borne intoxications: Staphylococcal, Bacillus, Clostridium etc. 				
	Detection of food-borne pathogens. Suggested Reading

Suggested Digital platform/Web link Course prerequisite To study this course, student must have passed semester V. Suggested Continuous Internal Evaluation (CIE) methods Total marks: 25 10 marks for Test 10 marks for presentation along with assignment 05 marks for Class interactions 5 Further Suggestions: None

Programme/Class: Degree	Year: Third (3)	Semester: Sixth (VI)			
Subject: Biotechnology					
Couse Code: B100603P	Course Title: Industrial and Environmental Biotechnology Lab				
Course Outcomes					
After completion of this course, s	After completion of this course, students will be able to-				
• understand various methods of screening of industrially important microorganisms					
from different sources.					
• understand the working of small scale fermenter and also determine the aeration efficiency of the fermenter					
• understand the technique of immobilization of cells like yeast and E.coli.					
Credits: 2					
Maximum Marks: 100	Minimum Passing Marks: As per U	University norms			
(75(UE)+25(CIE))					
Total Number of Lectures-Tutorials-Practical (in hours per week)L-T-P: 0-0-4					
	Topic	No. of Lectures			
	of bacterial growth curve.	60			
	hermal death point (TDP) of a microl	oial			
sample.					
	nd analysis of ethanol.				
4. Production and analysis of amylase.					
5. Production and analysis of lactic acid.					
6. Isolation of industrially important microorganism					
from natural resource.7. Calculation of Total Dissolved Solids (TDS) of water					
sample.	of Total Dissolved Solids (TDS) of wa				
-	of BOD of water sample.				
	of COD of water sample.				
	amination of Water by MPN Method.
