(57) Abstract :

The present invention is an IoT and machine learning bases method of communicating a digital message with an information signal. A sent message in the embodiment of the present disclosure may be a digital message, a short message, a VMS voice and other information. A description is in detail by using an example where the sent message is an IoT and machine learning bases a digital message with an information signal. A newly added network element may be selected as a performing body of the message sending method in an embodiment of the present disclosure.
