(57) Abstract :
When it comes to children being kidnapped, parents are on high alert. In addition, parents are working longer hours, which leaves them with less time to spend with their children. In addition, before they even enter the school, kidnappers will have swayed them. Because of this, schools bear primary responsibility for the safety of their students, and they can notify parents if their children fail to arrive at school on time by sending an alert message home with them. Using this system, parents are made aware of their children's various important statuses, such as their on-time arrival and out-time. A student's safety and security can be improved by using technology to keep an eye on them. Students' arrival and departure times from the bus and campus will be saved in a web-based system, and an SMS will be sent to their parents to let them know their child arrived safely. A text message will be sent to parents whose children are absent without permission. Parents can access the system's website to keep tabs on their children's activities. It is the goal of the School Security System to deter students from engaging in criminal behaviour and to alleviate parents' concerns.
